

29 June 1959

MEMORANDUM FOR: DPD/DDP

25X1A

SUBJECT : Kenyon Stabilizer, Model KS-3

1. Attached is a description of an interesting small gyroscopic device which makes it possible to hold steadily in the hand a variety of telescopic or photographic equipment which otherwise would be overly affected by wiggling and twitching of the arms or by the motion of a land, sea, or air vehicle. I am not sure how much of a direct interest any of my "customers" would have in a device like this but it seems to me you might find it worthwhile to bring it to the attention of some of your clients.

2. I have brought a copy of this to the attention of TSS; you may keep this copy or destroy it or do whatever you wish with it.
